DETAILED ACTION

Response to Amendment

This Office Action is responsive to the amendment filed April 18, 2003.

The rejection of claims 1 & 3 under 35 U.S.C. 102(e) as being anticipated by Voss et al. U.S. Patent 6,106,964 is overcome. The rejection of claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Voss et al. U.S. Patent 6,106,964 and further in view of Hendrix et al. U.S. Patent 5,68,535, is overcome. Claim 1 has been cancelled. Claims 2,3 and newly added 5-6 are allowed. However, claim 4 is rejected under 35 U.S.C. 102(e) as being anticipated by DiPierno Bosco et al. U.S. Patent 6,103,409.

Allowable Subject Matter

Claims 2,3 & 5-6 are allowable over the prior art of record because the prior art is silent to a fuel cell humidifying system comprising a flow path switching mechanism for switching gas passages leading to the humidifier.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 4 is rejected under 35 U.S.C. 102(e) as being anticipated by DiPierno
Bosco et al. U.S. Patent 6,103,409.

Bosco teaches a fuel cell humidifying system for supplying a fuel cell with a wet gas produced by the humidifier comprising a filter cleaning mechanism for preventing clogs (col. 1, lines 55-65).

Response to Arguments

Applicants contend that the subject invention is patentably distinct from Voss '964 and Hendrix '353, because the references do not teach or suggest a flow path switching mechanism or a cleaning mechanism for the humidifier. The assertion is correct and the rejections are overcome.
